

- **highlight** (*Optional*[*bool*], *optional*) – Highlight renderable (if str). Defaults to False.

Returns

A new child Tree, which may be further modified.

Return type

Tree

23.35 rich.abc

class rich.abc.RichRenderable

An abstract base class for Rich renderables.

Note that there is no need to extend this class, the intended use is to check if an object supports the Rich renderable protocol. For example:

```
if isinstance(my_object, RichRenderable):  
    console.print(my_object)
```
