

min_width: `int` | `None` = `None`

Minimum width of column, or `None` for no minimum. Defaults to `None`.

Type

`Optional[int]`

no_wrap: `bool` = `False`

Prevent wrapping of text within the column. Defaults to `False`.

Type

`bool`

overflow: `OverflowMethod` = `'ellipsis'`

Overflow method.

Type

`str`

ratio: `int` | `None` = `None`

Ratio to use when calculating column width, or `None` (default) to adapt to column contents.

Type

`Optional[int]`

style: `str` | `Style` = `''`

The style of the column.

Type

`StyleType`

vertical: `VerticalAlignMethod` = `'top'`

How to vertically align content (“top”, “middle”, or “bottom”)

Type

`str`

width: `int` | `None` = `None`

Width of the column, or `None` (default) to auto calculate width.

Type

`Optional[int]`

class `rich.table.Row`(*style=None, end_section=False*)

Information regarding a row.

Parameters

- **style** (`str` | `Style` | `None`)
- **end_section** (`bool`)

end_section: `bool` = `False`

Indicated end of section, which will force a line beneath the row.

style: `str` | `Style` | `None` = `None`

Style to apply to row.
