

20.8 Redirecting stdout / stderr

To avoid breaking the live display visuals, Rich will redirect `stdout` and `stderr` so that you can use the builtin `print` statement. This feature is enabled by default, but you can disable by setting `redirect_stdout` or `redirect_stderr` to `False`.

20.8.1 Nesting Lives

If you create a `Live` instance within the context of an existing `Live` instance, then the content of the inner `Live` will be displayed below the outer `Live`.

Prior to version 14.0.0 this would have resulted in a `LiveError` exception.

20.8.2 Examples

See `table_movie.py` and `top_lite_simulator.py` for deeper examples of live displaying.
