16.4 Multiple Progress

You can't have different columns per task with a single Progress instance. However, you can have as many Progress instances as you like in a *Live Display*. See live_progress.py and dynamic_progress.py for examples of using multiple Progress instances.

16.5 Example

See downloader.py for a realistic application of a progress display. This script can download multiple concurrent files with a progress bar, transfer speed and file size.
